Mobile application developer assessment.

You have to build an application using the given API in the postman collection. This is mainly a courier management system where an user can:

1. Login to his/her account.
2. See all the parcels.
3. Create new parcels.
4. Update the parcels.
5. Search parcels by recipientName, recipientPhone, city etc. (All the available search query params are given in the postman)
6. Users can see details of a parcel on a separate screen.

Complete the tasks as much as possible within 2 days.The UI/UX choice is yours. We will check the accuracy in the designs, alignments and functionalities.

You have to upload the code in github and generate a release APK. Send the github link and apk in the mail nafiul@urelaa.com
